

Output Of the Project

The image shows a web application interface for a 'Joke Danger Meter'. On the left, there is a vertical 'Jail meter' with a rainbow gradient at the top and a grey section at the bottom. The main area is a white card with a red-to-yellow gradient header. The header contains the title 'Joke Danger Meter' and the subtitle 'Find out if your joke is safe or offensive'. Below the header, there are six questions, each with 'No' and 'Yes' buttons. At the bottom of the card is a 'Check Result' button.

Joke Danger Meter
Find out if your joke is safe or offensive

Is your joke about a polotical party?

Does your joke involve religion?

Is it a dark humor joke?

Does it target a specific gender?

Is your joke about someone's mom/dad?

Is it a joke about a taboo topic?

This is the fun project where we have to first select the options for each question. Once the option is selected, then the button is disabled so no changes are made after the selection of the option.

Joke Danger Meter
Find out if your joke is safe or offensive

Jail meter

Is your joke about a polotical party?

Does your joke involve religion?

Is it a dark humor joke?

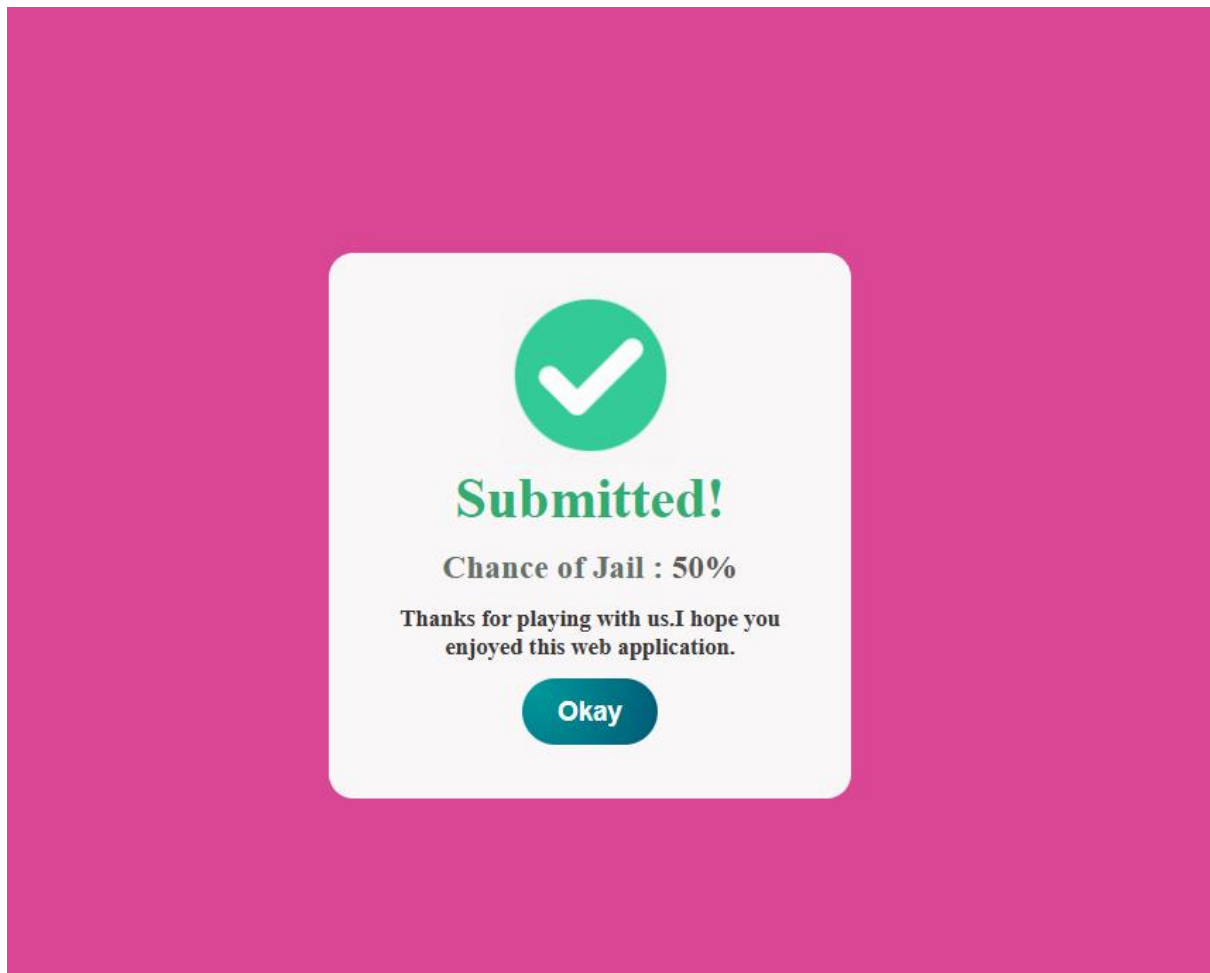

Does it target a specific gender?

Is your joke about someone's mom/dad?

Is it a joke about a taboo topic?

please wait....

After click to check result button then it will reflect to the result page and showing the result of selection.

So,this is how the result section looks like and after clicking on the okay button then it again start the game.
